The Dogs of Chernobyl

35 Years After The Nuclear Reactor Accident

Monday, August 16th at 6:30 PM on Zoom

Join Stephen Quandt, a feline behaviorist and researcher involved in a spay/neuter campaign in Chernobyl. His research was focused on the dogs that were descendants from the pets left behind after the nuclear disaster in 1986.

During this webinar, you will hear personal stories of meeting animals and inhabitants from the mostly abandoned town. He will share stories of hope, resilience, life, and even heroism!
